PROFESSIONAL SUMMARY

Results-driven Software Engineer with experience building scalable backend systems, enterprise web applications, and full-stack solutions using Node.js, Express.js, React.js, MongoDB, MySQL, and AWS. Skilled in developing Inventory Management and Employee Management Systems, admin portals, job portals, and custom WordPress solutions. Proficient in RESTful APIs, microservices, Docker, RabbitMQ, PM2, Elasticsearch, and cloud deployment, with a strong focus on clean architecture, scalable system design, and high-performance applications. Awarded 3rd place in a university final-year project competition and committed to continuously learning emerging technologies and software engineering best practices.

TECHNICAL SKILLS

FRONTEND

HTML, CSS, React, Next.js
Bootstrap, Tailwind CSS,
Material UI . Elementor
(WordPress)

BACKEND

Node.js, Express.js
DATABASE
Mongo, supabase

TOOLS

Git, Nginx

FRAMEWORK/TECHNOLOGIES

DOCKER, KUBERNETES, AWS

PROFESSIONAL EXPERIENCE

Quantum Communications

Sep 2025-Present

Full Stack Developer

Islamabad, Pakistan

Designed and developed internal business applications, including an Inventory Management System and Employee Management System, to streamline company operations and improve workflow efficiency. Additionally, built and maintained dynamic WordPress websites for both internal and client projects

Verso

Oct 2024-July-2025

Backend Developer

Cheyenne, WY, US

Developed and maintained admin portals for Medivo (medical billing) and A2Z Appliances (blogs), ensuring intuitive interfaces and efficient functionality. Designed and implemented a job portal for Verso, enhancing user engagement and streamlining job searches. Gained hands-on experience in deployment processes using PM2 and Docker on AWS, ensuring scalable and reliable application hosting.

National Information Technology Board

July 2022 - July 2022

Frontend Intern

Islamabad, Pakistan

2-week internship at NITB. Helped me improve my front-end skills in HTML CSS.

PROJECTS

Enterprise Distributed Order Pipeline: Built a microservices-based Order Management Platform with an API Gateway, Authentication, Inventory, Order, Payment, and Notification services, leveraging RabbitMQ for asynchronous communication, the Saga Pattern for distributed transaction management, Optimistic Locking for concurrency control, and Elasticsearch for fast fuzzy product search

Chatting Application: Developed a real-time chatting application using Socket.io. Features include sending PDF files, Word documents, images, videos, and video calling using WebRTC.

SmartDial (Final Year Project): Implemented voice separation for employee and client, emotion detection, hate speech detection and sarcasm detection. Audio training for employees in low-pressure environment.
